

Assignment 2-Online food store

Basic EDA

1. Load the dataset and display the first 10 records.
2. Find the total number of rows and columns in the dataset.
3. Identify the data type of each feature.
4. Check whether the dataset contains any missing values.
5. Generate the statistical summary of all numerical columns.
6. List all categorical and numerical features separately.
7. Plot the distribution of customer ages using a histogram.
8. Create a count plot showing the number of customers in each occupation.
9. Plot the distribution of monthly income categories.
10. Find the top 5 most common educational qualifications.
11. Compare the distribution of **Gender** across different **Occupations** using an appropriate visualization.
12. Analyze the relationship between **Marital Status** and **Feedback**.
13. Compare **Family Size** across different **Monthly Income** groups using a box plot.
14. Visualize the relationship between **Age** and **Family Size** using a scatter plot.
15. Create a heatmap of correlations among all numerical features.
16. Analyze how **Occupation**, **Monthly Income**, and **Feedback** are related.
17. Compare the average family size for each educational qualification.
18. Plot customer locations using **Latitude** and **Longitude** on a scatter plot and identify any visible clusters.
19. Determine which **Pin Codes** have the highest number of customers.
20. Perform a complete EDA and summarize **at least five meaningful business insights** that could help an online food delivery company improve its services.
